SSQ

SSQ is one of the world's leading quarriers and suppliers of high-grade, unfading natural roofing slate. Our principal markets are in Europe and North America. Our exports are as far afield as Australia, Trinidad, Norway and Japan — in all, over 20 countries.

Owners, architects and installers choose our slates for their:

- Exceptional colour stability.
- Exceptional weather resistance (surpassing the strictest international standards.)
- Suitability for significant historic and distinctive contemporary structures.

Riverstone, featured here, is our signature slate.

Riverstone

sediment → shale → slate → phyllite slate

Riverstone is phyllite slate.

Phyllite slate marks a culmination: It is what happens when the geological forces that form slate are permitted to continue. With each step - from sediment to shale, from shale to slate and from slate to phyllite slate – the stone becomes harder, denser and stronger.

Phyllite slate is rare – there are just a handful of quarries worldwide. Of these, only a few produce stone with the cleavage characteristics needed to make roofing tiles.

We own and operate the San Luis quarry in La Repressa, deep in central Argentina, between the Pampas and the high Andes. Quarried for centuries, its enormous reserves date back 560 million years to the pre-Cambrian era.

Riverstone phyllite slate offers superior performance for the most demanding requirements.

Trusted source

Accepted by English Heritage and Historic Scotland

Riverstone is one of the few slates certified for use by English Heritage and Historic Scotland, the leading authorities charged with preserving Britain's landmark structures, such as Buckingham Palace and The British Museum.

Accepted as an alternative to indigenous materials

Riverstone is accepted as an alternative to indigenous materials. An example of this can be found on the right, where Riverstone had been chosen to replace a 300-year roof supplied from local materials in Brecon, Wales.

Bristol University, Bristol, England

Quality assurance

Tested

Riverstone has surpassed the strictest testing requirements. It has achieved the highest classifications in the US and UK.
(See page 8 for details.)

Guaranteed

We stand behind our slate. Consistent with its history of use and test results, Riverstone is guaranteed to last in excess of 100 years.

Technical Support

SSQ's technical support team can help you achieve a range of effects on straight or curved surfaces, using standard or special shapes, random widths and/or graduated lengths. Our team is able to supply detailed sketches and advice, concerning specification, quantity take-off, cost-comparison and overall strategy, to achieve an optimum installation.

Devon, UK

Helsinki, Finland

Environment

Roofing slate is naturally green. It is non-toxic, not petrol based and non-leaching. Other products have to be synthesized and then processed. Already formed, natural slate removes synthesis from the equation, reducing CO2 emissions.

Riverstone's exceptional longevity allows it to do the work of 2, 3 or 4 other roofs. Doing more with less: This is the essence of sustainability.

But we do not rest on the laurels of our exceptional stone. Through a policy of continual improvement, our yields have steadily climbed over the years. We now help to set the standard for efficiency in the slate sector.

Flock House Farm, Aberdeen, Scotland

Product performance

Surpasses International standards

Riverstone has been tested and has surpassed the strictest international quality standards:

- UK: BS EN 12326 – Achieves A1-T1-S1 (highest classification)
- US: ASTM C 406 – Grade S1 (highest)

Characteristics

Riverstone's unique phyllitic structure and composition produce a slate that is highly resistant to the physical and chemical processes that age building stone of any type. Riverstone slate is characterized by:

■ Exceptionally low water absorption (achieves A1 classification)

Far outperforming test requirements, Riverstone slate's exceptionally low water absorption allows it to withstand extreme freeze-thaw cycling, as well as salt exposure, that can weaken more absorbent slates. Riverstone is well-suited to the harshest climates.

■ Exceptional weather (acid) resistance (achieves S1 classification)

Far outperforming test requirements, Riverstone slate's exceptional weather resistance makes it nearly impervious to atmospheric pollutants.

■ Exceptional strength (achieves modulus of rupture greater than 60MPa)

Far outperforming test requirements, Riverstone slate is cut along the grain – an extra precaution that maximizes load resistance.

■ A virtual absence of deleterious minerals such as pyrite and calcite (achieves T1 classification)

Riverstone's virtual absence of deleterious minerals prevents fading and weakening caused by oxidation and mineral conversion (mineral conversion occurs, for example, when calcite in lower-grade slate converts to gypsum, which in turn swells and stresses the slate's substrate causing it to degrade prematurely).

Private residence, UK

Selections and thicknesses

Ultra

5-7mm

Pre-sorted. Maximum consistency of thickness and planarity at an extra cost for the most subtle presentation; especially appropriate for mansard and other steep roofs with minimum foot traffic, or where weight is a concern.

Montana

6-9mm

Customary sorting recommended. Moderate variances in thickness and planarity for a textured presentation and a moderate cost; especially appropriate for mansard and other steep roofs with minimum foot traffic, or where weight is a concern.

Selections and thicknesses

Gruesa

9-12mm

Robust. Moderate consistency of thickness and planarity for a textured presentation and an especially strong shadow-line; appropriate for many designs.

Dimensions and weights*

Size (inches)	Size (mm)	Selection	thickness (mm)	weight per m2 (kg)
24x12	600x300	Ultra	6-8	43
20x12	500x300	Montana	6-9	45
20x10	500x250	Gruesa	9-12	65
18x12	450x300			
16x10	400x250			
16x8	400x200			
14x8	350x200			
12x8	300x200			

Please contact us if you require other sizes, thicknesses or shapes.

*All dimensions and weights are nominal approximations. Slates are cut to metric measure.

Notes

Colours and textures have been rendered as accurately as possible; the photographic process and the nature of natural stone prevent exact representations.

Being a natural product, slate's physical and chemical characteristics can vary.
